JULIET BONARERI NYAKOE

RevOps & GTM Systems Specialist · Commercial Data & Analytics

Nairobi, Kenya · +254 723 902 312 · bonanyke@gmail.com · linkedin.com/in/juliet-nyakoe-443bab47

SUMMARY

RevOps and GTM Systems professional with 5+ years of experience in GTM environments, progressing from Salesforce administration into HubSpot, Demandbase and cross-platform reporting. I turn complex, multi-source data and business requirements into the system logic that teams rely on day to day: lead scoring and qualification, routing, campaign operations, database governance and dashboards. Experienced in partnering with product, engineering and commercial teams across emerging markets.

CORE SKILLS

Platforms: Salesforce, HubSpot Marketing Hub Enterprise, Demandbase, Amplemarket, Calendly, LinkedIn Sales Navigator, Chorus, ZoomInfo / Web Insights

Analytics & BI: Salesforce & HubSpot reports and dashboards, Tableau, Power BI

RevOps: lead scoring and qualification, routing and lifecycle management, workflow automation, data quality and governance, sandbox and change management

Campaign operations: UTM tagging, Salesforce and HubSpot campaign build, HubSpot lists and workflows, campaign readiness coordination

PROFESSIONAL EXPERIENCE

CloudFactory Kenya Limited, Nairobi — Jan 2022 – Present

RevOps Specialist — Mar 2026 – Present

Current role. RevOps and GTM Systems work across Salesforce, HubSpot, Demandbase and Amplemarket.

Salesforce Analyst — Jun 2023 – Mar 2026

Salesforce data management, reporting and user administration.

Apr 2025 — scope expanded: took over HubSpot and Demandbase alongside Salesforce.

Junior Salesforce Analyst — Jan 2022 – Jun 2023

Started in a Salesforce-focused analyst role covering data management, reporting and user administration.

Selected achievements

- Migrated a legacy, lightly documented lead-scoring model into HubSpot's newer scoring environment ahead of the deadline, preserving the established qualification rules to maintain continuity in lead qualification and downstream lead management.
- Separately, worked with Sales and Marketing leadership to redesign the inherited qualification framework: fit and engagement signals combined with negative scoring, a single qualification threshold, regional AE routing, Slack and email alerts, and nurture for lower-scoring leads. Weekly MQL volume rose from approximately 10 to 18, and Sales reported better-quality MQLs.
- Identified a capacity risk in an 80,000-contact HubSpot environment and built inactivity and free-email-domain logic, with manual updates for existing contacts and workflows for new ones, reducing marketing contacts from approximately 74,000 to 60,000 and keeping free-email leads from syncing to Salesforce.
- Support campaign operations across HubSpot and Salesforce: build UTM-tagged URLs, create and configure campaigns in both systems, associate URLs and assets with HubSpot campaigns, build lists and workflows, and coordinate outstanding requirements, assets and lead-upload dependencies with stakeholders.
- Replaced a broken website Book-a-Meeting flow after the Sales Hub decommission: evaluated Calendly and Chili Piper, then configured Calendly routing with regional round-robin that preserved existing CRM owners. Irrelevant meetings fell by about 80%. Also built Contact Us routing for Service, Partnership and Careers inquiries.
- Built standardized Salesforce dashboards covering the inbound funnel from lead to closed opportunity (lead funnel, MQL-to-Won progression, pipeline metrics), validating figures against source records and giving Leadership, Sales and Marketing a shared view with weekly subscriptions.
- Established a HubSpot Standard Sandbox as a QA and change-management layer, acting as primary tester and Super Admin. Caught critical defects before production, including a workflow loop and a Salesforce country-mapping dropout; no production incidents were attributable to changes tested through the sandbox during the period observed.

- Migrated six HubSpot inbound sequences to Amplemarket, configured Salesforce field mapping and onboarded eight Sales users. Ran the evidence-based review of the Demandbase tenant that informed the decision to decommission it.

Kenya Postel Directories, Nairobi Nov 2011 – Dec 2021

Systems Support Manager Nov 2011 – Dec 2021

- Helped move a five-country commercial operation (about 50 users across Kenya, Tanzania, Mozambique, Cape Verde and São Tomé) from manual, document-based tracking to a centralized Salesforce CRM, working with Salesforce consultants from requirements through configuration, data migration, testing and rollout.
- Helped define fields, page layouts, validation rules, workflows, reports, dashboards and user access; supported tablet-based field capture of customer information, opportunities and contracts.
- Trained about 50 users in virtual and in-person sessions, with monthly refresher support for six months.

EDUCATION & TRAINING

MBA, Strategic Management (ongoing) — Jomo Kenyatta University of Agriculture and Technology

Data Analytics with Excel and Power BI — Moringa School, 2025–2026

Bachelor of Business and Information Technology, Networking — Africa Nazarene University, 2013–2016
